

# Hoof Evaluation and Consultation

...a link between your farrier and vet  
for the ultimate in equine hoof care

## *Imaging and Evaluation:*

Dr Emery will work with your farrier to identify structural problems in the hoof that may be causing problems with your horse ranging from obvious lameness to slight imperfections in movement. Using a combination of digital x-rays, movement evaluation and consultation with your farrier, he can help determine the correct trimming and shoeing options to eliminate or minimize the problem.

## *A Cooperative Effort:*

Dr Emery's ultimate goal is to unite the special skills, equipment, experience and knowledge of your farrier and Beadle Lake Large Animal Clinic, utilizing this unique cooperative effort to improve the health of your horse's hoof and as a result his overall health and ability to perform.

## Beadle Large Animal Clinic

7115 Tower Road Battle Creek, MI 49014
